JM EAGLE MEADVILLE PLANT PRODUCTS ADDED TO NYSDOT APPROVED LIST

JM Eagle's Eagle Corr PE product made at JM Eagle's Meadville, Pa., plant is being added to the New York State Department of Transportation's Approved List of materials.

Recognizing JM Eagle's smooth interior corrugated polyethylene pipe (Eagle Corr PE Dual Wall) and perforated corrugated polyethylene underdrain tubing (Eagle Corr PE Single Wall Perforated), the NYSDOT gave its approval for use in transportation projects in the state. Approval followed an evaluation of the Meadville plant, an audit, and an interview with a plant official.

"The NYSDOT subjected Eagle Corr PE to significant testing and examination in considering approval," says Dan O'Connor, JM Eagle vice president of sales for PE. "Clearly it believes that the superior attributes of Eagle Corr PE make it suitable for the rigors of roads and highways."

JM Eagle introduced its Eagle Corr PE single-wall and dual-wall products in 2009. The company has made significant strides through the NTPEP (National Transportation Product Evaluation Program) in

gaining statewide approvals for DOT projects across the nation. Miles of it have already been installed in large- and small-scale road projects.

Eagle Corr PE from JM Eagle is the first choice in gravity flow drainage applications. Eagle Corr Dual Wall features a dual-crown corrugated exterior for greater pipe stiffness values and a hydraulically smooth interior for maximum efficiency, plus a superior flexible conduit design. It supports H-25 live loads with a minimum cover of 1 foot, while allowing for cover heights of 100 feet.

Eagle Corr PE Single Wall is a more economical option for drainage applications where a more heavy-duty pipe is not required. It is available with a solid or perforated wall. A full line of standard and custom fittings in either a soil-tight or watertight connection complements both products.
